Endicott College
Hiring Manager

Application for Adjunct Professor, School of Science and Technology

Dear Hiring Manager,

With over eight years of dedicated experience in university-level instruction and laboratory management, I am writing to express my strong interest in the Adjunct Professor position within the School of Science and Technology at Endicott College. My Master's degree, coupled with a proven track record of delivering engaging academic content and rigorously evaluating student performance, aligns perfectly with your requirements for this role.

My background includes lecturing on Electrical & Computer Engineering courses and successfully supervising advanced senior-year projects, such as "Development of wireless electrical stimulation systems" and "Neural Dust: An Investigation of the Latest Advances in Computer Interface Technology." This experience demonstrates my capability to guide students through complex topics and contribute meaningfully to courses like "Introduction to Machine Learning and Distributed Computing." Furthermore, as a Laboratory Assistant, I engineered and implemented numerous laboratory demonstrations, enhancing practical learning experiences, a skill directly applicable to teaching courses such as BIO 202L – Anatomy and Physiology II Lab.

I am deeply committed to upholding academic policies, ensuring strong learning outcomes for students, and fostering an environment of clear communication. My experience includes consistently evaluating and grading student assignments, midterms, final exams, and laboratory reports, ensuring high academic standards. I am confident in my ability to deliver effective instruction, whether in-person or through online asynchronous formats, and to provide the necessary support to students seeking assistance or clarification.

I am eager to bring my diverse teaching background, robust evaluation skills, and dedication to student success to Endicott College. I welcome the opportunity to discuss how my qualifications can benefit your students and the School of Science and Technology, particularly for the upcoming Spring 2026 semester.

Sincerely,
Alexios Kouzalis
